OBJECTIVE

Passionate and results-driven Software Engineer with expertise in backend development, distributed cloud applications, and RESTful API design. Proficient in Python, MERN stack, and Azure. Seeking to leverage my skills to build scalable, high-performance services.

EDUCATION

University of Waterloo

Waterloo, ON, Canada

- Master of Engineering in Electrical and Computer Engineering.

Jan. 2025 – May 2026

University of Calgary

Calgary, AB, Canada

- Bachelor of Science in Software Engineering with Distinction.

Sep. 2018 – May 2023

SKILLS

- Programming Languages:** Java, Node.js, Python, C/C++, C#, JavaScript.
- Backend Development:** REST APIs, Spring Boot, Express, Microservices Architecture.
- DevOps:** CI/CD Pipelines, Agile Methodologies, Automated Testing, Git.
- Tools & Technologies:** React, MongoDB, Docker, Terraform, Node.js, Azure.
- Agile Methodologies:** Experienced in working within Scrum teams to deliver projects on time.
- Collaboration & Integration:** Cross-functional team collaboration, integration of front-end/back-end systems.
- Data Science/ML Tools:** Scikit-learn, Pandas, NumPy, PyTorch, Spark.
- Problem-Solving:** Adept at identifying issues in data processing pipelines and delivering resilient solutions that prioritize simplicity and performance.
- AI/ML Exposure:** Familiarity with AI/ML models and their integration into data-driven applications.

PROFESSIONAL EXPERIENCE

Associate ML Software Engineer, AltaML | Invent Team

May 2023 – Sep 2023

- Designed and built an ETL pipeline in **Python** to automate the ongoing Machine Learning (ML) use case for a large energy company, forecasting churn rates of over **15 million customers** and helping increase the yearly revenue by up to **5 million dollars**.
- Constructed ML models (Logistic Regression, Random Forest, Naive Bayes classifier, and more) achieving strong results with ~83% model accuracy.
- Crafted **SQL** scripts to generate client data resulting in a **20%** improvement in data integration efficiency and facilitated smooth and efficient data integration.
- Collaborated in developing an innovative copilot tool using **Prompt Engineering** with cutting-edge **LLM** technology, the text-DaVinci-003 model from OpenAI, to enhance non-technical employees' interactions with **Airtable**.
- Leveraged distributed systems and cloud-based solutions, using Azure for large-scale data processing and machine learning workflows, performing warehousing and versioning for datasets with 1,000,000+ samples each.

Software Developer Intern, Mobility Quotient | Analytics Team

May 2021 – May 2022

- Published content on a custom-built e-commerce platform using **HTML**, **CSS**, and **PHP**, ensuring consistent layout and branding across web pages.
- Engineered automated test suites for web applications using **Selenium**, ensuring reliable and efficient performance of client-facing services.
- Managed content on the platform's **CMS**, handling regular updates and ensuring **SEO** best practices were followed.
- Conducted cross-browser **testing** and validation to ensure content displayed correctly across different devices.

PROJECTS

ScholarSpace, Online Learning Social Media Platform

2024 - Present

- Developed and deployed a backend system using **Node.js**, **Express**, and **MongoDB** to handle user data and interactions, integrating social media features.
- Implemented **RESTful APIs** and **GraphQL** for data exchange between clients and servers, ensuring scalability and security.
- Integrated **JWT** and **Google OAuth** for secure user authentication and login processes.
